

# The web in *real time*

David Pineda Osorio @Pineiden

August 29, 2017

## Contents

### 1 Creation of Techno Machines

Here we will learn some wonderful and hard things. Maybe i couldn't obtain all the knowledge about all necessary to handle real time systems but the contents that i will provide to you will be worth it. With all of that you can start a little application and with some more research create a wonderful techno machine that will wonder all people.

This content is created with my living work and i intend to contribute to the commonwealth. Hence i invite you to do the same. Learn, create and share with the humanity your work, create commonwealth.

The technologies used in this contents are available on the web and i recommend to use Gnu/Linux, some distribution of the Debian family (Debian, Mint, Ubuntu, etc). You have to go deep on different languages: bash, python, javascript, typescript, erlang, postgres; and design patterns: observer pattern, model-view-controller pattern, etc.

<b>2</b>	<b>Install and configure the technologies</b>
2.1	IDEs
2.2	Python
2.3	Virtual Environment
2.4	Django
2.5	Postgres
2.6	RabbitMQ
2.7	Angular
<b>3</b>	<b>A General Schema</b>
<b>4</b>	<b>The Backend</b>
<b>5</b>	<b>The Channel</b>
<b>6</b>	<b>The Frontend</b>
<b>7</b>	<b>The Messages</b>
<b>8</b>	<b>The End</b>
